

## New Product Profile for PTC thermistors

The new Product Profile, "PTC Thermistors" presents the current product range of PTC thermistors. Highlights include the extended product range of SMD limit temperature sensors in case sizes 0402, 0603 and 0805, which are qualified to AEC Q -200 and are thus suitable for automotive applications, and two product families of inrush current limiters designed to limit charging currents in converter and inverter circuits. Moreover, the Product Profile features the miniaturized T15\* family of dual SMD PTCs for telecoms applications.

### Contents

- Overload protection
- Inrush current limiters
- Overload protection for telecoms applications
- Switching PTC thermistors
- Motor-start PTC thermistors
- Sensors (motor protection, filling level and limit temperature)
- Heating elements

The 28-page Product Profile can be downloaded or ordered at the EPCOS website free of charge.
