Ceramic Capacitors: New sample kit

EPCOS has put together a new sample kit containing ceramic capacitors of the MLSC, Advanced and High-CV series for automotive electronics designers. Made of ceramic materials X7R and C0G, they cover the capacitance range from 0.1 nF to 2.2 µF and rated voltages of 25, 50 and 100 V. The sample kit (ordering no. B37999A9999K99) is complemented by a CD containing data sheets and processing notes.

You can download the text of this press release and press photos from www.epcos.com/tradepress
Further information on the products will be found at www.epcos.com/ceramic_capacitors
The sample kit can be ordered at www.epcos.com/inquiry
