## Film capacitors

### **EPCOS Feida joint venture extends product range**

EPCOS has significantly extended its range of film capacitors for AC applications with the portfolio of its Chinese joint venture EPCOS Feida. These products may be used as motor start or motor run capacitors, particularly in the single-phase asynchronous motors of household appliances, air-conditioning systems, compressors, pumps, and other drives.

The portfolio covers film capacitors for voltages between 250 V and 630 V AC with capacitance values of between 1 and 120  $\mu$ F. They are maintenance-free, RoHS-compatible and withstand ambient temperatures of up to 85 °C. Plastic or aluminum cans with various mounting and contact options are available as packages. In addition to standard versions, the EPCOS range includes types to EN 60335-1 and P2 versions to EN 60252-1. The capacitors are available with UL810, VDE, CQC, and TÜV approval.
